```
CC A polymerase chain reaction (PCR) assays have been developed for CC detecting an antibiotic resistant strain of Streptococcus pneumoniae CC using primers based on the penicillin binding protein 2B (pbp2B) gene CC and the pbp1A gene. The products and methods can be used for detecting CC S. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumococcal meningitis and CC identifying any antibiotic-resistant S. pneumoniae strains in a sample. CC The methods can be used for detecting S. pneumoniae strains in a sample. CC The assays can be used to detect other pathogens causing meningitis. CC The assays can be used to detect other pathogens causing meningitis. CC The assays can be used to detect an antibiotic resistant strain of CC S. pneumoniae with a minimum inhibitory concentration (MIC) of CC S. pneumoniae with a minimum inhibitory concentration and DC 0.25-1 micro g/ml where the PCR products detected are a 1043 bp and CC a 224 bp product. The present sequence represents a Streptococcus pneumoniae pbp1A transpeptidase encoding region (TER) isolate nucleotide sequence from the present invention.

A polymerase chain reaction (PCR) assays have been developed for detecting an antibiotic resistant strain of Streptococcus pneumoniae using primers based on the penicillin binding protein 2B (pbp2B) gene and the pbp1A gene. The products and methods can be used for detecting S. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumococcal meningitis and clentifying any antibiotic-resistant S. pneumoniae strains in a sample. The methods can be used for detecting S. pneumoniae strains resistant to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. The assays can be used to detect other pathogens causing meningitis. The assays can be used to detect an antibiotic resistant strain of S. pneumoniae with a minimum inhibitory concentration (MIC) of O.25-I micro g/ml where the PCR products detected are a 1043 bp and a 224 bp product. The present sequence represents a Streptococcus pneumoniae pbp1A transpeptidase encoding region (TER) isolate nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (SAME-)

The assays can be adapted to detect other pathogens causing meningitis. The assays can be used to detect other pathogens causing meningitis. The assays can be used to detect an antibiotic resistant strain of S. pneumoniae with a minimum inhibitory concentration (MIC) of 0.25-1 micro g/ml where the PCR products detected are a 1043 bp and a 224 bp product. The present sequence represents a Streptococcus pneumoniae pbplA transpeptidase encoding region (TER) isolate nucleotide sequence from the present invention.
                                                                                                                                                      A polymerase chain reaction (PCR) assays have been developed for detecting an antibiotic resistant strain of Streptococcus pneumoniae using primers based on the penicillin binding protein 2B (pbp2B) gene and the pbplA gene. The products and methods can be used for detecting S. pneumoniae, particularly antibiotic resistant strains. They can be used for simultaneously diagnosing pneumococcal meningitis and identifying any antibiotic resistant S. pneumoniae strains in a sample. The methods can be used for detecting S. pneumoniae strains resistant
                                                                                                                                                                                                                                                                                                        Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (SAME-)

                                                                                                                                                                                                                                                                                                                                                                                                  used for simultaneously diagnosing pneumococcal meningitis and identifying any antibiotic-resistant S. pneumoniae strains in a sample. The methods can be used for detecting S. pneumoniae strains resistant to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. The assays can be adapted to detect other pathogens causing meningitis. The assays can be used to detect an antibiotic resistant strain of S. pneumoniae with a minimum inhibitory concentration (MIC) of 0.25-1 micro g/ml where the PCR products detected are a 1043 bp and a 224 bp product. The present sequence represents a Streptococcus pneumoniae pblh transpeptidase encoding region (TER) isolate nucleotid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (SAME-)

The products and methods can be used for detecting pneumoniae, particularly antibiotic resistant strains. They can be preumoniae, particularly antibiotic resistant strains.

A polymerase chain reaction (PCR) assays have been developed for detecting an antibiotic resistant strain of Streptococcus pneumoniae using primers based on the penicillin binding protein 2B (pbp2B) gene and the pbp1A gene. The products and methods can be used for detecting s. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumococcal meningitis and cidentifying any antibiotic-resistant s. pneumoniae strains in a sample. The methods can be used for detecting S. pneumoniae strains resistant to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. The assays can be used to detect other pathogens causing meningitis. The assays can be used to detect an antibiotic resistant strain of s. pneumoniae with a minimum inhibitory concentration (MIC) of 0.25-1 micro g/ml where the PCR products detected are a 1043 bp and 224 bp product. The present sequence represents a Streptococcus pneumoniae pbp1A transpeptidase encoding region (TER) isolate nucleotide sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   (SAME-)

This sequence represents the DNA encoding exp2. This sequence is identical to that for ponA which encodes penicillin-binding protein (Pbpla). The protein encoded by this sequence is involved in adhesi of bacteria to target cells. This sequence encodes an exported prot

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of S.pneumoniae. Export proteins are the process in clude bacteria that are virulence determinants. Other export proteins include plpA (see AAR70152), expl, exp3, and pad1 (encoded by the sequence shown in AAQ83259). This sequence can be inserted into an expression vector (preferrably a bacterial expression vector) to provide for high levels of expression of the protein. The protein can then be used in the production of an accellular vaccine. These vaccines are used to provide protection from Gram positive bacterial infection. Antibodies against export proteins can be used for diagnosis of infection and in passive immune therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                              CC detecting an antibiotic resistant strain of Streptococcus pneumoniae CC detecting an antibiotic resistant strain of Streptococcus pneumoniae CC using primers based on the penicillin binding protein 2B (pbp2B) gene CC using primers based on the penicillin binding protein 2B (pbp2B) gene CC and the pbp1A gene. The products and methods can be used for detecting CC s. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumococcal meningitis and CC The methods can be used for detecting S. pneumoniae strains in a sample. CC The methods can be used for detecting S. pneumoniae strains resistant CC The assays can be adapted to detect other pathogens causing meningitis. CC The assays can be used to detect other pathogens causing meningitis. CC The assays can be used to detect an antibiotic resistant strain of S. pneumoniae with a minimum inhibitory concentration (MIC) of a 224 bp product. The present sequence represents a Streptococcus pneumoniae pbp1A transpeptidase encoding region (TER) isolate nucleotide sequence from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC A polymerase chain reaction (PCR) assays have been developed for CC detecting an antibiotic resistant strain of Streptococcus pneumoniae CC using primers based on the penicillin binding protein 2B (pbp2B) gene CC and the pbp1A gene. The products and methods can be used for detecting CC s. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumococcal meningitis and CC identifying any antibiotic-resistant s. pneumoniae strains in a sample. CC The methods can be used for detecting S. pneumoniae strains resistant to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. CC The assays can be used to detect other pathogens causing meningitis. CC The assays can be used to detect an antibiotic resistant strain of S. pneumoniae with a minimum inhibitory concentration (MIC) of C 0.25-1 micro g/ml where the PCR products detected are a 1043 bp and CC 0.25-1 micro g/ml transpeptidase encoding region (TER) isolate nucleotide concentration the present sequence represents a Streptococcus cous sequence from the present invention.

related microorganisms e.g. algae, archaea, bacteria, fungi and CC parasites, for universal detection and for specific and ubiquitous CC detection and identification of an algal, archaeal, bacterial, fungal CC and parasitical species, genus, family and group. A nucleic acid (I) CC and parasitical species, genus, family and group. A nucleic acid (I) CC detection of any bacterium, fungus or parasite in a sample and for the CC detection of at least one antimicrobial agent resistance gene or at CC least one toxin gene. hexA nucleic acids are used for the specific and CC ubiquitous detection and for identification of Streptococcus pneumoniae. CC (I) can be used to design a therapeutic agent which is effective against CC microorganisms. Microbial species or genus or family or phylum or group CC which can be detected include Abiotrophia adiacens, Bordetella sp., CC wycobacterium sp., Enterobacteriaceae group, Escherichia coli, CC Mycobacteriaceae family, Pseudomonads group, Escherichia coli, CC wisseria gonorrhoeae and Staphylococcus sp., Using DNA based tests CC provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved.

CC AAH00010 to AAH002304 represent nucleotide sequences and primers/probes CC which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a mechanism which probes nucleic acids of tuf, fus, atpb and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more and the producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more used for producing probes and/or primers for detecting one or more

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          QY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                           related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and biquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia addacens, Bordetella sp.,
                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of archaeal, bacterial, fungal and parasitical species in a test same
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Species specific; genus specific; family specific; probe; dete identification; algal; archaeal; bacterial; fungal; parasitica microorganism; diagnosis; translation elongation factor Tu; to translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   isseria gonorrhoeae and Staphylococcus sp.. Using DNA based tests ovides faster results than substrate specificity tests as results can determined in an hour and improved accuracy is also achieved. HO0010 to AAH002304 represent nucleotide sequences and primers/probes ich are given in the exemplification of the present invention.

cc detecting an antibiotic resistant strain of Streptococcus pneumoniae cusing primers based on the penicillin binding protein 2B (pbp2B) gene can the pbp1A gene. The products and methods can be used for detecting S. pneumoniae, particularly antibiotic resistant strains. They can be used for simultaneously diagnosing pneumococcal meningitis and compared to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. The assays can be used for detecting S. pneumoniae strains meningitis. CC The assays can be adapted to detect other pathogens causing meningitis. CC The assays can be used to detect an antibiotic resistant strain of S. pneumoniae with a minimum inhibitory concentration (MIC) of CC 0.25-1 micro g/ml where the PCR products detected are a 1043 bp and CC a 224 bp product. The present sequence represents a Streptococcus pneumoniae pbp1A transpeptidase encoding region (TER) isolate nucleotide concentration the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial: vaccine; primer; ds.
The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more
                                                                                                                                                                                                   Claim

parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacteriaceae family, Pseudomonads group, Streptococcus sp., Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved.

AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          microorganisms e.g. algae, es, for universal detection

                                                                                                                                                                                                                                      A polymerase chain reaction (PCR) assays have been developed for detecting an antibiotic resistant strain of Streptococcus pneumoniae using primers based on the penicillin binding protein 2B (pbp2B) gene and the pbp1A gene. The products and methods can be used for detecting S. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumococal meningitis and identifying any antibiotic-resistant S. pneumoniae strains in a sample. The methods can be used for detecting S. pneumoniae strains resistant to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. The assays can be used to detect an antibiotic resistant strain of S. pneumoniae with a minimum inhibitory concentration (MIC) of

The DNA, vectors and host cells described in the method of the invention are useful for the recombinant expression of the polypeptides. The polypeptides are useful for treatment or prevention of disease, or diagnosis of disease related to expression or activity of such a polypeptide. They can also be used to screen for compounds which interact with and inhibit or activate such a polypeptide. The polypeptides (or DNA encoding them, via gene therapy) are also useful for inducing an immunological response in a mammal. The antagonists are useful to inhibit such bacterial polypeptides. The polypeptides are useful to identify antimicrobial compounds and antibiotics. They are also useful to determine their role in pathogenesis of infection, dysfunction and disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1246

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Db
nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungil and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Species specific; genus specific; family specific; probe; detection identification; algal; archaeal; bacterial; fungal; parasitical; microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Meisseria gonorrhoeae and Staphylococcus sp., Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved.
AANO0101 to AANO02304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

```
consider the method of the invention can be used for the universal detection of at least one at least one at least one toxin gene or at least one toxin gene or at least one of the specific and universal detection and for specific and ubiquitous detection of any bacteriam, fungiand constant of any bacteriam, fungiand gene or at least one antimicrobial agent resistance gene or at least one antimicrobial agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., corynebacteriam sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Escherichia coli, consisted in an hour and improved accuracy is also achieved.

Chahloolo to Abhooloud the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                 nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Species specific; genus specific; family specific; probe; detectio identification; algal; archaeal; bacterial; fungal; parasitical; microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial;

Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of archaeal, bacterial, fungal and parasitical species in a test sa a test sample algal,

1580pp; English.

Species with a combination of defined primer pairs. The method can be cused for producing probes and/or primers for detecting one or more related microorganisms e.g. alyae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous context detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) cobtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the cotation of any bacterium, fungus or parasite in a sample and for the cotation of the last one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microbial species or genus or family or phylum or group which can be detected include Abiotrophia addacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptcocccus sp., Neisseria gonorrhoeae and Staphylococcus sp.. Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention. nucleic acids of tuf, fus, atpD and/or recA genes from which pro and/or primers are derived. The method comprises amplifying the acids of determined algal, archaeal, bacterial, fungal and parasections of determined algal, archaeal, bacterial, bacterial, archaeal, bacterial, bacterial, archaeal, bacterial, bacteria The present invention describes nucleic acids of tuf, fus, atpD a method for generating a repertory parasitical probes nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             QY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Species specific; genus specific; family specific; probe; deterior identification; algal; archaeal; bacterial; fungal; parasitica microorganism; diagnosis; translation elongation factor Tu; to translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPAGE.
The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recR genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        detection of any bacterium, fungus or parasite in a sample and for the cd detection of at least one antimicrobial agent resistance gene or at clast one toxin gene. hexA nucleic acids are used for the specific and cubiquitous detection and for identification of Streptococcus pneumoniae. (1) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Corynebacteriaceae family, Pseudomonads group, Streptococcus sp., Corynebacteriaceae and Staphylococcus sp., Using DNA based tests concept for the specificity tests as results can be determined in an hour and improved accuracy is also achieved.

Corynebacteriaceae family, Pseudomonads group, Streptococcus sp., Corynebacteriaceae and Staphylococcus sp., Using DNA based tests corynides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved.

Corynebacteriaceae family are present nucleotide sequences and primers/probes contains and primers and primers and primers are given in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                        used for simultaneously diagnosing pneumococcal meningitis and identifying any antibiotic-resistant S. pneumoniae strains in a sample. The methods can be used for detecting S. pneumoniae strains resistant to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. The assays can be adapted to detect other pathogens causing meningitis. The assays can be used to detect an antibiotic resistant strain of S. pneumoniae with a minimum inhibitory concentration (MIC) of
                                                                                                                                                                                                                                                                                    0.25-1 micro g/ml where the PCR products detected are a 1043 bp and a 224 bp product. The present sequence represents a Streptococcus pneumoniae pbplA transpeptidase encoding region (TER) isolate nucleo

                                                                                                                                                                                                                                                                                                                                                                                                                 polymerase chain reaction (PCR) assays have been developed for tecting an antibiotic resistant strain of Streptococcus pneumoniae ing primers based on the penicillin binding protein 2B (pbp2B) gened the pbplA gene. The products and methods can be used for detecting pneumoniae, particularly antibiotic-resistant strains. They can be a preumoniae, particularly antibiotic-resistant strains.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       멍
        The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Species specific; genus specific; family specific; probe; detection identification; algal; archaeal; bacterial; fungal; parasitical; microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial;
                                                                                                                                                                                                                                               Nucleic acid sequences are used to generate universal probes primers which can be used to identify and detect the presence archaeal, bacterial, fungal and parasitical species in a test

(I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Mycobacteriaceae and Staphylococcus sp., Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A polymerase chain reaction (PCR) assays have been developed for CC detecting an antibiotic resistant strain of Streptcoccus pneumoniae cu using primers based on the penicillin binding protein 2B (pbb2B) gene CC and the pbplA gene. The products and methods can be used for detecting CS. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumococcal meningitis and CC identifying any antibiotic-resistant S. pneumoniae strains in a sample. The methods can be used for detecting S. pneumoniae strains resistant CC to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. CC The assays can be adapted to detect other pathogens causing meningitis. CC The assays can be used to detect an antibiotic resistant strain of CS. pneumoniae with a minimum inhibitory concentration (MIC) of CS. pneumoniae with a minimum inhibitory concentration (MIC) of CS. pneumoniae phplA transpeptidase encoding region (TER) isolate nucleotide CC pneumoniae phplA transpeptidase encoding region (TER) isolate nucleotide

(1) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria gonorrhoeae and Staphylococcus sp. Using DNA based tests provides faster results than substrate specificity tests as results can be accounted and contrary is also achieved.
                                                                                                                                                                                         1104

A nucleic acid (I) obtained using the method of the invention can be used for the universal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous

related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and biquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia addacens, Bordetella sp., or parasite of the contraction of the contraction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            identification; algal; archaeal; bacterial; fungal; parasıtıca microorganism; diagnosis; translation elongation factor Tu; translation elongation factor G; Reck recombinase; resistance; translation elongation factor G; Reck recombinase; resistance;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ρ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Qy
                                                                                                                                                                                          and/or primers are derived. The mechanical and parasitical acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal obtained using the method of the invention can be asample and for the
                     detection of any bacterium, fungus or parasite in sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hava nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp.,
                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal. harterial functions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of archaeal, bacterial, fungal and parasitical species in a test sa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bergeron M
